1. Introduction

The Document is created for the understanding of Restful APIs, used for the sending data to the NODP Database, which is used as an essential part of National Open Data Portal.

A RESTful API is a policy-driven, resource-oriented approach for enterprise-level integration. It provides outstanding scalability and dependability for service-oriented integration, service administration, and traditional message processing in a variety of IT contexts.

The RESTful API provides endpoints that various applications or channels can utilize to connect and send data. User Authentication for Each EMIS province wise is also implemented and credentials will be shared with each Stake holder.

This document list down not only the data fields, to be shared by an organization with Pakistan Institute of Education through National Open Data Portal, but also the corresponding coding/lookup tables for certain data fields. Therefore, utmost care must be applied while transforming data to NODP requirements.

During the data transformation and sharing, **Institutions** table hold the pivotal value. As a first step, all the code values used in the Institutions table must be transformed against the look-up tables mentioned in front of each data field. After the institutions table, any sequence can be followed for transformation and sharing of data.

Table 2 to 9 are relevant for providing data about building, rooms, and other facilities.

Tables 11 to 17 pertains to the enrolment data. If an organization opts to share detailed profile of each student, then it needs to provide data in table 11 only while ignoring tables 12 to 17. In case an organization is sharing aggregated data of students then they have to provide data in tables 12 to 17 while ignoring table 11.

Tables 18 to 24 applies to the data of teaching and non-teaching staff. If an organization opts to share detailed profile of each teacher and/or non-teaching staff, then it needs to provide data in table 18 and 19 only while ignoring tables 20 to 24. In case an organization is sharing aggregated data of teaching and non-teaching staff, then they have to provide data in tables 20 to 24 while ignoring tables 18 and 19.

2. Status Codes

Following is the list of status codes, with their description.

- a. 200 (Success)
- b. 404 (Page not found)
- c. 500 (Internal Server Error)

3. Message Headers

Message header of all types of transactions is of fixed length and contains identical fields and this will be part of every request/response. Breakup of the common message headers.

4. POST Data in the Following tables:

User will be able to send data Using the API Provided and the data should be in JSON Format.
